

TinyTERM Desktop Version History

Updated 3/15/2012

Version 4.7.2 – March 15, 2012

- Multiple scripted FTP transfers no longer cause error 4547 (CR 234)
- Te.read() accepts numeric keypad input (CR 616)
- Dragging to change window size no longer causes vertical scrollbar to leave artifacts (CR 969)
- SecureFT no longer crashes after opening a saved config file (CR 998)
- Drag & drop .key email attachment into product to license it
- 3270 display and speed fixes

Version 4.7.1 – January 24, 2012

- Extensive enhancements to TN3270 emulation
- Additional debug capabilities added
- TN3270 now connects to VSE and VSC systems (CR 776)
- VT420 added to CScript documentation (CR 782)
- te.SetRGBEntry documentation corrected (CR 793)
- DDE_Enable documentation corrected (CR 796)
- te.SetBackgroundImage documentation corrected (CR 863)
- TN3270 3278-5 mode does not draw extra lines at bottom of screen (CR 971)
- Extended attributes not recognized in TN3270 (CR 981)
- Paste character Ø has been corrected (CR 986)
- Fixed Wyse60 display problems (CR 990)
- Emulator window keeps focus when switching between applications (CR 991)

Version 4.7.0 – October 13, 2011

- Changed version numbering scheme
- Added auto line wrapping and row/column resize
- Data capture no longer opens print settings dialog (CR 501)
- Destructive backspace works in all TN3270/TN5250 field types (CR 759)
- Fixed character errors in code page STD 1253 Windows Greek (CR 933)
- SSL/TLS connections report on status line as (connected = SSL) (CR 949)

Version 4.65.5012 – September 22, 2011

- Fixed UAC install issue on Windows 7

Version 4.65.4985 – August 30, 2011

- Updated SSL library
- Added AES encryption to SSL (CR 527)

Version 4.65.4849 – May 11, 2010

- Selecting printers on Windows 7 fixed (CR 898)

Version 4.65.4732 – March 10, 2010

- ESC and DEL no longer can improperly disconnect when used with SCO telnet servers (CR 856 & CR 865)
- ^N and ^O are now active in VT series emulations (CR 404)

Version 4.65.4446 – March 10, 2010

- Changed "TinyTERM 3270" product name to "TinyTERM Subscription Host Access" (TinyTERM SHA)
- New menus and toolbar art in TinyTERM SHA mode
- Added ability to import Attachmate(tm) Extra!(tm) configuration files
- Updated connection configuration wizard when "New Connection" is selected

Version 4.64.4308 – January 26, 2010

- Added support for TinyTERM 3270 keys
- Added enhanced look and feel to the 3270 emulator to more closely simulate a native terminal

Version 4.63.4341 - November 20, 2009

- SSL/TLS connections with the TN3270 emulation to certain hosts failed (CR 885)
- Added 28,800 baud rate selection to serial port setup (CR 887)
- In rare circumstances, using an IP address instead of a hostname would fail to resolve properly (CR 607)
- Fixed potential TN3270 crash when using undefined keys
- Fixed improper TN3270 attribute detection on certain types of screens
- Fixed improper TN3270 capability query responses
- New documentation of control strings in programmers reference manual (CR 710)

Version 4.62.4177 – September 4, 2009

- Fixed a problem with SSH when connecting to a Cisco SSH server on IOS that manifested as "Connected Refused"
- Added support for SSH2 banner requests
- Fixed a potential failed assertion when the above SSH connection failed
- Updated the TE ActiveX control to allow easier integration into other projects without having to implement as many methods

Version 4.61.4057 - April 2009

- FIXED: .tpx file extension not registered after TinyTERM install (CR 769)
- FIXED: Error when double-clicking a .tpx file on an NTFS formatted drive (CR 270)
- The Web Server product is now installed with all TinyTERM Plus version installs and is licensed accordingly
- All installs are now done with a MSI installer
- Evaluation versions are no longer installed automatically. A license key will be needed. These keys can be requested at <http://www.censoft.com/download>
- Licensing now takes place within TinyTERM itself. Use Help | Add License Key to add a purchased license for use with TinyTERM
- RSA authentication now compatible with all versions of ssh servers (CR 788)
- FIXED: Connection failed (965) - Error in host key (CR 662)
- FIXED: TN5250 shows as TN3270 in emulation setup dialog (CR 814)
- FIXED: dlglplus.res errors when running TinyTERM Web Server Client (CR 767)

- FIXED: SSH doesn't prompt on an expired password (CR 562)
- FIXED: Login tab info not changed if "Establish Connection on Open" is checked when TinyTERM starts (CR 552)
- Enhancement request for a keepalive option for SSH (CR 227)
- Enhancement request to allow saving of the scrollback buffer (CR 850)
- FIXED: TinyTERM does not display all TAPI error messages (CR 757)
- Enhancement request to increase the .tpx file keys to 2048 bytes (CR 835)
- FIXED: TinyTERM Help file fails in Windows Vista. Old-style .hlp file has been removed (CR 845)
- Enhancement request for a default SecureFT startup configuration (CR 717)
- FIXED: Extra SecureFT license in registry causes startup problems (CR 764)
- Enhancement request to change the port SecureFT uses (CR 828)
